

Mirage Versions

With this document, you will find a list of changes and fixes that have been applied to the software over the years. If you have any questions about any of the steps, please contact our support. All information can be accessed in English only.

3.6.5

FIXED bleed print marks were not scaled with the image, and disappeared completely at high scale factors

CHANGED improved reliability of media data communication with Canon PRO printers, esp. when a single printer is used by many clients at the same time.

3.6.4

ADDED Support for Canon PRO-6000 printer

ADDED Epson USA media package for SC-P5000

FIXED rare crash on Mac, when unusual input devices were connected

FIXED measuring a chart on an SC-P5000, that was printed on a different printer, got stuck in measurement and eventually failed

FIXED Canon iPF5100, iPF6300/6350, iPF6300S printers wrongly used 3mm instead of 23mm bottom margin for sheet fine art papers

3.6.3

FIXED JPEG files with 90 and 270 degree rotation values in their EXIF data caused distorted previews, and spool errors, if there were also warning-worthy issues present in the files.

FIXED rare layout issues with placement mode "One Copy per Sheet/Row", which caused images to vanish in preview

FIXED Proofing with the SpectroProofer on the SC-P5000 failed

ADDED Epson Backlit media to SC-P20000/10000 standard media package

ADDED "Legacy" media types to Epson USA media package for SC-P800

3.6.1

FIXED mirage paper feed correction on Canon PRO printers didn't work properly

FIXED several fixes in acquiring media type updates from Canon PRO printers

FIXED some media types in the Canon iPF x4x0 models wouldn't print at all

FIXED issues on Mac when trying to print to European SL-D700 papers

FIXED use of SpectroProofer ILS20EPUV caused the printer to reset with an error code

FIXED SC-P5000 didn't have a proper printer icon

FIXED SC-P5000 used wrong cut sheet bottom margin

FIXED since macOS 10.12.4 droplets didn't work anymore due to a change in OS behaviour

FIXED grayscale image files were wrongly accepted in profile creation mode

FIXED in certain situations in proof mode, too much white space was enforced left and right from the media wedge

FIXED queue monitor needlessly warned about a media change when launched in pause mode

CHANGED updated SL-D700 European ICC profiles to match new printer driver

CHANGED Epson corrected the cut sheet bottom margin for the SC-P20000/10000 to 14mm

CHANGED the manual measurement Fogra media wedge now uses a larger gap between the actual wedge and the logo. this should make measuring easier.

CHANGED in proof mode, grid layout is no longer available. It only leads to illegally overlapping layouts due to the extreme size of the media wedge.

CHANGED renamed Epson USA and some Epson Europe mediatypes for the SC-P9000/7000 explicitly with "LLK" or "Violet" inkset, if they are available for both

3.6.0

ADDED Support for Epson SC-P5000

ADDED Support for gray print mode on Canon PRO printers

FIXED Epson SC-P20000/10000 gray print mode didn't work on Mac due to installer issues

FIXED Epson SC-P800 used wrong minimum media height for paper source "Roll as Sheet", which could cause Mirage to hang

FIXED Some unsupported borderless paper sizes were wrongly allowed with the Canon PRO-1000

FIXED Canon PRO-4000/4000S/6000 didn't show "44 inch" as available borderless width

FIXED In rare cases print jobs for Canon PRO printers specified illegal paper sizes and were rejected by the printer, or caused the printer to print only a small rectangle

FIXED TCP addresses specified with leading zeros were interpreted wrongly. This seemed to happen only with some Zeroconf SC-P20000/10000 printers

3.5.6

ADDED Support for Adobe InDesign CC 2017

CHANGED old crash dumps are now removed automatically to avoid extremely large log archives

FIXED help window didn't show a close button on macOS Sierra anymore

FIXED potential crash when printing to Canon IVEC printers, especially on 32-bit systems

3.5.5

ADDED Support for Adobe Photoshop CC 2017, and Adobe Illustrator CC 2017

CHANGED SC-P20000/10000 now supports Gray print mode if the printer is connected by TCP/IP

FIXED Image files without any resolution information did not fall back to 72dpi

FIXED Issues with automation workflows not always restoring the media size

FIXED Canon PRO-printers on Mac, connected by USB, didn't receive custom media stored in the printer

FIXED Mirage PRO feature was unavailable on some types of dongles

FIXED Charts for manual measurement on the Epson SP4900 are now shorter to ensure reliable measurement

3.5.4

FIXED Connections to Canon iPF printers on OS X 10.11 and macOS 10.12 could be unreliable

3.5.3

CHANGED SC-S80600 now supports newly introduced print modes

FIXED for some lower quality Epson papers using the "Epson Standard.icc" profile, colors differed between Mirage and the driver. Using those papers with custom ICC profiles always produced correct colors.

FIXED when adding new media to a Canon PRO printer with the MCT, Mirage would sometimes forget to keep older custom media stored in the printer. Only the latest addition of media was then available in Mirage.

FIXED in some cases, there were problems with correctly setting the media height from an automation workflow

3.5.2

FIXED printing too many images with long filenames, caused invalid print jobs on Canon PRO printers, which were discarded by the printer

FIXED proofing two pages in a row using the SpectroProofer could fail

FIXED on Windows, some corrupt embedded ICC profiles were not recognized until time of print, and caused a print error

FIXED deleting the last automation workflow wrongly triggered reloading all workflows present on disk, and made it impossible to delete all workflows

FIXED Custom media types installed in Canon PRO printers without a non-generic ICC profile were not available in Mirage

FIXED on Mac USB-connected Canon iPF printers where not shown in the printer browser

CHANGED updated maximum media length for Canon PRO-1000 to 64.75 cm in accordance with latest firmware

CHANGED Epson SL-D700 EX driver is now also recognized by the printer browser

3.5.1

ADDED support for Adobe Photoshop CC 2015.5, and Adobe Illustrator CC 2015.3

FIXED Some 1200x1200dpi print modes of the Epson SC-P20000 (not SC-P10000) caused an error to be shown on the printer display

3.3.3

FIXED Image files with resolution defined as dots/cm instead of dots/inch opened with wrong original size.

FIXED Some borderless configurations with the Epson SC-P800 caused an error in the printer display.

FIXED Crop dialog displayed centimetre values after opening, even if inch was configured as general measurement unit.

CHANGED In the Proof print dialog, the measurement mode was not automatically set to "Automatic", even though it was available.

CHANGED Epson Stylus Pro 4900 no longer restricts the use of A2+ sized media because of its length

ADDED Printer icons for SC-Px000 printers.

3.3.2

FIXED some random crashes on OS X 10.11

FIXED Profile Creation Wizard allowed selection of sheet media with Canon Spectrophotometer printers, which is not supported

FIXED certain media widths on the SL-D700 could not be selected with inch units, but with centimeter units.

FIXED Some Epson Europe and Epson USA media for the Epson SC-P9000/7000 and SC-P8000/6000 printers failed to print

CHANGED enhanced reliability of TCP connections on certain misbehaving Windows systems

3.3.1

FIXED "Mirage Job Archive" and "Mirage Measurement" apps crashed during launch on some versions of OS X 10.11

3.3.0

ADDED Support for the Epson SC-P9000/7000 and SC-P8000/6000 printer models

ADDED Epson Europe specific media for SC-P600 and SC-P800

FIXED Cut sheet media size wasn't always correctly restored when opening the Mirage print dialog

FIXED A rare spooling abort, which happened in very special circumstances depending on image dimensions

FIXED Some Windows systems showed strange spooling errors when other Windows services accessed the spool directory

FIXED Digigraphie wedge for manual measurement was printed in wrong size

FIXED SC-P600 Photo Quality InkJet paper didn't have a profile assigned

3.2.1

FIXED Mirage could crash if image files contained invalid ICC profiles. Such profiles are now discarded.

FIXED 3.2.0 introduced an error which prevented some borderless modes to be selected for the Epson SC-P600 and SC-P800

FIXED Epson SC-P600 used wrong bottom margin for cut sheet source.

FIXED Abbreviations for some Canon inks were inaccurate.

ADDED Epson SL-D700 now offers an additional source "Roll - Cut After Each Row", which offers dynamic cut length.

3.2.0

ADDED support for Epson SC-P800 printers

ADDED support for Adobe CC 2015

FIXED adjusted Epson SC-P600 borderless margins to more closely match the driver

FIXED when scaling down large images to photo size on the SL-D700, horizontal white stripes could occur

FIXED different problems with non-ASCII characters in file paths

FIXED on Mac, if a hang of Mirage was recorded twice, and Mirage then was quit, the quit never proceeded, and a force quit was required

FIXED on Windows, large temporary files were not always cleaned up

FIXED TIFF alpha channels with "unassociated" and "unspecified" semantics were treated as "associated" alpha channels for the preview

FIXED TIFF alpha channels were not always correctly applied during print and could cause black areas instead of non-ink ones

3.1.2

FIXED Mirage InDesign CS5 plugin for Windows didn't show up in InDesign

FIXED Mac installer didn't correctly install Proof components when upgrading a Mirage v2 installation to v3

FIXED On Mac OS X 10.10, the next/previous page buttons were sized too small, and didn't show any text

FIXED Reduced flickering on Windows when using the Mirage Photoshop plugin

FIXED Rendering problems when applying override color spaces to PDFs without OutputIntent

FIXED Epson SC-P600 didn't use correct borderless margins, causing paper not to be covered completely in ink

FIXED No ICC profile was available for "Canvas Matte" on Canon iPF8400 printers, due to an incorrectly specified filename

CHANGED Image files with "Orientation" meta data, have that data correctly applied to image size and rotation

CHANGED Windows installer now installs the shortcuts in the Programs menu, and on the Desktop for all user accounts

CHANGED Single quality setting for Epson SL-D700 "SureLab Pro Paper Art Matte" is now called "High Quality" to match the printer driver

CHANGED Media size 8x6 inches is now available on the SL-D700

CHANGED SC-T7000/5000/3000 and SC-T7200/5200/3200 printers now offer "Very High Quality" print modes at 2880x1440 dpi, where applicable

CHANGED Updated Czech translation

3.1

ADDED Support for Photoshop Elements 13

ADDED New plug-in Support for Lightroom 5 (requires an additional license that is sold separately)

ADDED Support for Epson [SpectroProofer?](#) ILS30EP

ADDED Support for Epson SC-P600 (depending on license)
ADDED Support for Epson SL-D700 (depending on license)
ADDED Type of installed measurement device can now be set for each printer individually
ADDED New option "Fill Page" scales an image to cover the entire printable area
ADDED The Document list now has a "Copies" field which allows to quickly set the same number of copies for all images
ADDED "Rendering Intent" can be put in the job label
CHANGED Complex PDF files spool eight times faster than before
CHANGED Incremental rendering of PDF preview
CHANGED Canon printers now support cutting after the last page of a job
CHANGED Stored Settings dialog now behaves more consistently: all adds, deletes, and changes are committed when "OK" is pressed, or rejected when "Cancel" is pressed
CHANGED Epson SC-S30600/50600/70600 use faster new HTM 2, offering new print modes
FIXED Mirage couldn't be quit while the print dialog was open
FIXED Droplets on Windows could become corrupt when large Logo images were selected
FIXED Corrected minimum media size for some printer models
FIXED Other smaller fixes and performance improvements

3.0 1

- * ADDED Support for Adobe Illustrator CC 2014
- * ADDED Support for Adobe InDesign CC 2014
- * FIXED Installed ICC-Profiles with percent-sign (%) in the filename caused Mirage to crash on launch.
- * FIXED Imported custom media types could not be edited, and appeared as original Mirage media types.
- * FIXED Previews of grayscale mode images printed from the Photoshop Plugin showed obvious stripes.
- * FIXED In some versions of InDesign, document previews were incomplete, or showed drop shadows wrongly.
- * FIXED Out-of-memory issues when printing large InDesign documents.
- * FIXED On Windows Spindumps were written even when the app was not hanging. After updating you can safely delete the contents of "C:/Users/{username}/AppData/Roaming/dinax/Mirage/CrashDumps/SpinDumps", if it has grown very large.
- * FIXED Tiling layout shown in the Page Preview was way too dark.
- * FIXED Mac droplets with a single quote (') in their filename didn't run. This is fixed for newly created droplets only.
- * CHANGED Canon sheet paper source always used the nominal 23mm bottom margin, although some media types can work with 3mm.
- * CHANGED Print dialog no longer asked for confirmation when cancelling a print job

3.0

For more information on Mirage 3.0, please download our brochure:

http://mirage.dinax.de/Hilfe_DE.html?file=tl_files/dinax/Website%203.0/05%20Hilfe%20Support/Mirage%203.0%20-%20WhatsNew_EN.pdf

2.0.11

- FIXED TIFF files with fractional resolutions were initially scaled to the wrong size, because resolution and original image size were read incorrectly.
- FIXED Mirrored border crop print marks weren't printed at the correct location when paper feed correction was applied.

2.0.10

FIXED CMYK JPEG images were loaded with inverse pixel values on all channels

FIXED Version 2.0.9 wrongly limited paper sources for plain paper media types on Stylus Pro 3800/3880 printers

FIXED Measuring of charts on sheet media with Stylus Pro 9890/7890 works more reliably now.

FIXED Job label print mark was sometimes partly covered by the Fogra media wedge.

FIXED Finest Details option severely distorted images in some 720x360 dpi print modes.

2.0.9

ADDED Epson USA media packages are part of the installer

ADDED Installer support for Adobe Photoshop CC

CHANGED Updated SC-S50600 HTM for using better microweaving

CHANGED With active tiling, very small tiles (smaller than 5mm) are now disabled by default

FIXED 4900 now uses a larger bottom print margin for sheets in automatic proof mode.

FIXED Plain paper media types on 3800 and 3880 allowed borderless modes, although it is not supported.

FIXED WT7900 was not specified as SpectroProofer printer, although it can have one.

FIXED Media packages exported with the 2.0.0 to 2.0.8 Mirage, were no longer compatible to 1.6.x versions. Re-export problematic packages with the 2.0.9 to fix this.

FIXED Several fixes for compatibility with two-byte language Windows installations.

FIXED Colored borders and print marks got metallic silver painted under them, now it's only white ink.

FIXED White colored (not empty) borders did not get white ink painted, now they do.

FIXED Measurement label had wrong colors on CMYK printers.

FIXED On 64-bit Windows, memory allocation could fail, if the page file wasn't already the required size. Now the OS gets a chance to grow it.

FIXED In rare circumstances with susceptible images, horizontal scaling artifacts could show.

FIXED Some reverse media types which used mirroring, didn't produce any output.

FIXED Sometimes only the first document in Proof mode was set to "Measure", others were set to be printed as simulation only.

FIXED Use of white and metallic silver ink with PDF documents at the same time was not handled correctly.

FIXED Preview of "No White Ink" didn't always actually show the white removed from the image.

FIXED In the rare situation of printing two copies of the same document, with differing special ink configuration, they were printed identically.

FIXED Layout issues with the automation workflow dialog.

FIXED Rare issues with settings panel drag'n'drop in the automation workflow dialog, when it didn't fit entirely on the screen.

2.0.8

ADDED Epson SC-Sx0610/x0650/x0670/x0680 printer models (international variants) have been added to the supported list of printers

ADDED Epson production media types and profiles for SC-T7000/5000/3000

ADDED "10 inch" entry to standard roll sizes

CHANGED Corner crop marks used with mirrored borders are now shorter, and slightly inset into the mirrored border area

CHANGED after changing the crop region for an image, the image size setting is reset to 100%

CHANGED printer status popup now indicates if Matte or Photo black ink is selected in the printer

FIXED in certain configurations the print preview colors deviated slightly from what they should have been

FIXED the base media type was not correctly printed in the label of profile creation charts

FIXED SC-Sx0600 printers now use the correct values for vacuum intensity

2.0.7.

CHANGED Stylus Pro 4900 has smaller bottom margin in borderless print modes now, this is in accordance with driver behavior

CHANGED Epson SC-Sx0600 printers now support using RGB and CMYK based profiles in the same installation

FIXED Random error lines in some prints of scaled down images

FIXED Measuring previously printed chart sheets with SpectroProofer sometimes failed, unless the printer had paper width detection disabled

2.0.5

FIXED Due to color management changes in Mac OS X 10.8 (possibly also 10.7) preview colors were incorrect.

FIXED Very large mirrored borders could lead to crash and aborted print near the end.

FIXED "Spooling failed" errors under Windows Vista and later, when using Mirage Print after it had crashed.

FIXED When Photoshop CS5 or later crashed on a 64-bit Mac while Mirage was running, the dialog would not close on its own.

ADDED PDF/X-4 conforming PDF documents are now accepted for proof.

ADDED Advanced media setting "Head Movement" for SC-Sx0600 printers.

2.0.4

Fixed a bug when printing large image files using the "Mirage Print" application. This could cause parts of the image to appear in the wrong location.

It is now possible to disable some tiles of a tiled image.

The document list now shows the tile ID for tiled images.

Added support for Epson SC-T7000/5000/3000 printers.

Added support for Epson SC-S70600/S50600 printers.

2.0.3

FIXED Installation support for Photoshop Elements 11

FIXED Photoshop plugin opened the print dialog even when no suitable documents were present

FIXED [InDesign](#) didn't spool tiles correctly with extremely high scale factors. We now limit that scale factor and use the resolution warning to notify the user about it

FIXED some small changes in the Czech translation

REMOVED Spyder SR3 from available measurement devices

2.0.1

ADDED Czech language support

1.6.3

FIXED Mirrored borders were not shown correctly for cropped images in the preview, printing was not affected.

FIXED when using "Duplicate Medium" with an original medium in the custom media panel, the ICC files were not made available for the new media type.

FIXED Random InDesign crashes during or after opening the Mirage dialog. Especially version CS5.5 was affected.

FIXED When going back in the profile creation wizard, changing the printer, then going forward without further changes, resulted in a wrong measurement chart size.

FIXED Preferences sometimes became corrupted and prevented Mirage from launching.

FIXED In rare cases the "Quality" menu was empty until printer or media type was changed.

CHANGED Media groups are now listed at the top, before single media types entries, both in the custom media list and the media type menu.

FIXED Bleed wasn't calculated correctly for PDFs that contained rotated pages.

1.6.2

- FIXED Photoshop crashed on Windows, when a new document that had never been saved to disk, was opened with Mirage
- FIXED In rare cases when an image was rotated 270 degrees and overlapped the page, wrong spooling caused the Queue Monitor to be stuck very soon after printing started
- CHANGED Stylus Pro 4900 now supports borderless for 17" width on all sources, and on roll also 8" and 11"

1.6.1

- FIXED There was a problem with getting the document file path in Photoshop under Windows, resulting in empty job label print marks
- CHANGED Epson Stylus Photo R2880 and R3000 now use 3mm bottom print margins whenever possible
- FIXED Epson Stylus Photo R2880 front loading top margin was incorrect (3mm instead of 2cm)
- CHANGED "13 inch" roll size is now called "13 in / 12.95 in" and has size 12.95 inch

1.6.0

- ADDED Support for Adobe CS 5.5
- ADDED Images can be cropped by value or interactively within Mirage now
- ADDED Mirage optimize the placement of images and pages for you once you finished your settings
- ADDED New checkbox "Print finest details" doubles input resolution (useful for vector formats, like AI, ID, PDF)
- ADDED Support for Hahnemühle Gallerie Wrap stretcher bars
- ADDED A new set of crop marks to the "Print Marks" Area
- ADDED Photo-Black now supported to print to matte media
- ADDED Support for double cut mode
- ADDED One or more custom media can now be exported into a mediapkg.zip, and re-imported elsewhere

Please download our file "What's new in Mirage 1.6".

1.5.3

- FIXED WT7900 loaded white ink from tanks, even when "No White Ink" was selected for print
- FIXED Media packages could not be installed from Zip files on Windows
- FIXED Borderless modes for 9600/7600 printers didn't work properly

1.5.2

- FIXED Measurement of profile charts could fail when printed to sheet media, unless the measurement step was executed separately from print.
- FIXED In rare occasions, errors during profile chart print/measurement could cause a crash

1.5.1

- FIXED Mouse scroll wheel works in print dialog settings panels on Mac
- FIXED Paper menus in existing stored settings were not updated without restart after custom media types were added in the settings dialog
- FIXED When updating to Mirage 1.5.x on Mac, 9800/7800/4800 printers did not function correctly unless a clean install instead of an update was performed
- FIXED Very long PDF documents were printed with small parts at top/bottom missing
- FIXED Media size in stored settings was initially not always taken from the current print dialog settings
- FIXED Selecting a predefined standard paper size did not always have an effect
- FIXED Problems with storing/restoring media group configuration on Windows with non-ASCII user folder paths
- FIXED In some situations a fine black line was printed between image and mirrored borders
- FIXED English online help was not English

1.4.1

• InDesign master spread items were not drawn or printed by Mirage 1.4.0. This has been corrected in this version. Only InDesign users profit from this update.

1.4.0

• ADDED Completely redone Mirage Queue Monitor, allowing pausing, prioritizing, and previewing jobs

• ADDED Support for parallel printing to multiple printers

• ADDED Support for Photoshop CS5, 32 bit on Mac

• ADDED Support for Photoshop CS5, 32 and 64 bit on Windows

• ADDED Support for InDesign CS5

• ADDED Mirage for Illustrator CS3/CS4/CS5 as part of Mirage Design Edition

• FIXED A long standing issue which could lead to slightly incorrect colors for certain images in InDesign documents

• FIXED Photoshop plugin crashed when opening images with extreme aspect ratios (like 100:1)

• FIXED Colored and mirrored borders were not shown correctly for rotation 0 and 180 in preview

• FIXED Spooling failed on Windows if non-ASCII characters were in the queue directory path

• FIXED Mirage Pro profile print and measuring now also works in 64-bit Photoshop version on Windows

Please download our file „What’s new in Mirage 1.4“.

1.3.0

Please download our file “What’s new in Mirage 1.3”.

1.2.4

ADDED Support for Epson Stylus Pro 3880/3890, 9700/9710/7700/7710

1.2.3

FIXED Potential crash of Mirage for Photoshop on Mac OS X, especially with VERY large image files

FIXED Automatic creation of ICC profiles could fail on Windows, if the path to the user directory contained non-ASCII characters

FIXED For certain media types the color patches for automatic ICC profile creation were printed in grayscale

FIXED Starting with Mac OS X 10.6, after opening the Mirage Photoshop plugin once, opening Photoshop files by double-click in the Finder, or per drag'n'drop failed until Photoshop was restarted. This is now fixed.

1.2.2

ADDED Support to print/measure/create profiles using the Stylus Pro 9900/7900 with SpectroProofer. This is a buyable add-on option and is not available for free.

ADDED Mirage now has its own crash handler, and tries to dump the state of crash for analysis and bug fixing.

ADDED advanced media settings like platen gap, paper suction, and others is now possible for custom media

FIXED Printing a grayscale image to an RGB printer using mirrored image borders resulted in very corrupt mirrored borders.

FIXED Printing an InDesign document larger than the available medium caused a distorted print result.

FIXED Prerelease versions wrongly considered older release versions as suitable updates and informed the user about it regularly.

FIXED Tab key did not work in "Advanced" panel of settings dialog.

FIXED Media settings dialog can no longer be quit with "OK" if some data was missing. This caused an exception and crash of Photoshop.

FIXED "Browse" buttons in custom media dialog expanded to fill the entire row height under

Windows

FIXED Issues with recognizing a valid license, if it was installed in a file path that contained special characters like umlauts or accents

FIXED Using ICC Profiles with special characters like umlauts in their file path, failed under Windows

FIXED The "Mirage Print" menu entry did not show up in the InDesign keyboard shortcut editor

CHANGED License status in settings dialog is more detailed now.

CHANGED The license wizard dialog can now be used to install add-on feature licenses without overwriting the main license.

CHANGED Entries to the "Ideal sheet gap" textfield in the settings dialog, are copied directly to the "Minimum sheet gap" textfield, to prevent user errors.

CHANGED Settings dialog now stores its size and position, and restores it next time.

1.2.1

FIXED The print preview looked obviously wrong in gray print mode with gamma settings other than "Normal". Actual prints were not affected negatively by this issue.

1.2

ADDED Support for Epson Stylus Pro 4000 (Windows only)

ADDED Support for borderless printing

ADDED Page can be placed on the medium by dragging with the mouse. Guidelines labeled with distance to paper edge are drawn during this. The page snaps to special positions on the medium.

ADDED It is now possible to change the cropped content region in the page and print preview.

ADDED Support to print multiple copies of one Photoshop image. Gaps between the image rows and columns can be controlled in the Settings dialog.

ADDED Photoshop plugin now provides a new cut mode to cut after each row of copies.

ADDED A toggle button in the borders UI, which forces entered values to be made equal for all border fields

ADDED Print dialog now shows a warning icon whenever the image size exceeds the media size

ADDED Border styles Empty, Mirrored Image, and Mirrored Image (YouFrame)

ADDED Option to center image on page, even if print margins are asymmetrical

ADDED Complete Chinese localization

ADDED Photo format standard paper sizes to quick select popup menu

ADDED Support for Chinese Epson printer models Stylus Pro 9910/7910, 11880C, 9880C/7880C, 4880C, 3800C

ADDED Job title and other information is sent to the printer

CHANGED Print dialog now starts with 100% custom size, instead of fit to page

CHANGED The left hand size of the print dialog retains its size now even when the advanced pane is opened or closed. The dialog window also keeps its width then.

CHANGED Custom media dialog now checks ICC profile color space before accepting the profile, and shows a dialog notifying the user about the wrong color space.

CHANGED Image size exceeding the media size is now supported for Photoshop

CHANGED Page size exceeding the media size is now supported for InDesign except in the case of bleed area, for which we revert to the old behaviour of limiting the page size to the medium size.

CHANGED Software update check now recognizes a release version that is newer than a current pre-release version

CHANGED Renamed the previous "Center" option to "Center on printable area"

CHANGED Installing latest Adobe CMM version 1.1 on Windows now

CHANGED When selecting an ICC profile for a custom paper, it is automatically set for all quality modes which don't have a profile assigned yet

CHANGED Enabled microweaving in printer for Epson Stylus Pro 11880, 9900, 7900

CHANGED Improved quality of distributed ICC profiles for printers working in CMYK mode

FIXED License wizard mentioned 10 days trial license, while it's really 14 days

FIXED Print dialog was not be restored to original size, if it was previously exactly as big as the screen

FIXED It was possible that calibration bars were placed outside the medium, if rotation was active

FIXED Gray mode preview did not show neutral grays, while prints were neutral

FIXED Disabled soft proofing for Profile Creation mode preview

FIXED Disabled soft proofing for Gray mode preview

FIXED Potential crash in print dialog when no printers are available

FIXED Paper sizes US Legal and US Letter were mixed up

FIXED If a printer was unavailable due to lack of license or other issues, it could happen that it would be lost from the preferences

FIXED Mirage is now compatible with Adobe CMM 1.1

FIXED Gray mode print results did not match with the original Epson printer driver's

FIXED Entirely empty print bands caused a print abort

1.1.2

* FIXED Print marks missing on PowerPC Macs

1.1.1

FIXED Mac installer did not install profiles with very long names correctly on Mac OS X 10.4. This affected Epson Stylus Pro 4800, Epson Stylus Pro 9800/7800, Epson Stylus Pro 9600/7600 and very few papers for Epson Stylus Pro 11880 and Epson Stylus Pro 9900/7900

FIXED A missing profile would not disable the "Normal" print mode, and could cause a crash of the host application when trying to print

1.1.0

ADDED Support for Adobe Photoshop CS2 on Mac and Windows

ADDED Support for Adobe Photoshop 7, CS on Windows

ADDED Support for Adobe Photoshop Elements 6 on Mac and Windows

ADDED Support for Adobe Photoshop Elements 7 on Windows

ADDED Support for Epson Stylus Photo R2880 for Mirage Master Edition

FIXED Issues with installation of Photoshop CS4 plugin on Windows Vista 64bit

1.0.4

FIXED 4800/7800/9800 printers on Mac were not available

FIXED print preview did not show correct colors when using media with custom profiles

1.0.3

FIXED windows mirage installer showed an empty line as possible plugin install destination if Photoshop CS3 was previously installed and later uninstalled

FIXED an issue that could cause image errors when printing centered on sheet media

FIXED Mirage for Windows now checks reliably if the Adobe CMM is installed and warns the user if it isn't

CHANGED updated Windows HTMs for printers Epson Stylus Pro

11880/9880/7880/4880/9800/7800/4800/3800

1.0.2

ADDED Gamma value selection when printing in Gray mode

ADDED support for Stylus Pro 7900/9900 on Mac

ADDED support for Stylus Pro 3800 on Mac with RGB HTMs

ADDED support for InDesign CS4

ADDED language support for French, Italian, Spanish, Simplified Chinese

FIXED print marks did not extend around borders

FIXED Photoshop Bitmap mode images were printed inverse

FIXED Photoshop Gray mode images were sometimes printed with ghost images of themselves overlaid

FIXED additional white borders at the end of a roll print were not "printed"

FIXED switching between sheet sources retains the sheet size even when margins are changing

FIXED switching between roll and sheet sources retains the image size

FIXED memory leaks

CHANGED Installer now installs the Adobe CMM

CHANGED Installer is now localized

CHANGED custom media type profiles are now copied to the per-user profiles directory and not the global mirage profiles directory

1.0.0

First public release, distributed at Photokina.
